VERSION CONTROL	Git, GitHub
LEADERSHIP	Team management, task allocation, mentoring, coding standards, QA process, documentation

EXPERIENCE

Web Development Team Lead — Digital Pie

JUL 2025 — PRESENT

- Lead a team of **5 developers** (1 senior, 1 mid-level, 3 junior), allocating work by skill and availability and mentoring the four junior and mid-level developers.
- Own reliability across **300+ client websites** and **50+ monthly retainer accounts**, covering updates, backups, uptime monitoring, and incident response across Cloudways, Cloudflare, and DNSimple.
- Rebuilt the company website end to end using **Claude Code**, raising Lighthouse from the 60s on desktop and 40s on mobile to **99 on both** and achieving a **0.7s Speed Index** on PageSpeed Insights.
- Diagnosed the bottlenecks in the site delivery process and rebuilt it end to end — setup, pre-launch, and post-launch — introducing QA checklists, coding standards, and documentation that catch issues before handover to the client.
- Built an internal WordPress plugin that tracks pre- and post-launch checklist progress in one view, logs which developer signed off each item, and emails status to the team and managers — giving the team an audit trail to trace any post-launch issue back to its source.
- Implement technical SEO fixes from specialist requirements and automated site audits; coordinate off-site link building with marketing.
- Harden sites and servers through plugin audits, vulnerability patching, and security best practices.

- Rolled AI-assisted development (Claude Code, MCP) out across the team for debugging, log analysis, and faster delivery.

Web Developer — Freelance

NOV 2024 — JUL 2025

- Delivered custom web solutions for **6 clients** across WordPress and Shopify.
- Customized and extended an existing Shopify theme for a fashion startup — fully responsive, with third-party app integrations.
- Developed a bespoke WordPress site with custom functionality for a corporate blog, improving content management and user engagement.
- Provided ongoing maintenance, security audits, and performance optimization, sustaining **99.9% uptime**.
- Translated Figma and Adobe XD mockups into pixel-accurate, responsive interfaces.

Web Development Manager — Roger Roger Marketing

JUL 2022 — OCT 2024

Web Developer, Jul 2020 — Jul 2022 · promoted to Manager after two years

- Led a team of **2 junior developers**; shipped **100+ client websites** and landing pages over four years on fixed scope, budget, and timeline.
- Rebuilt sites migrating from other CMS platforms into WordPress with design and functionality preserved exactly, and the reverse where clients required it.
- Converted PSD, Figma, and XD files into production websites using Divi, Elementor, and ACF.
- Integrated third-party APIs and resolved performance and UX issues across the client portfolio.
- Implemented the SEO specialist's technical requirements on every build; configured and managed DNS records.
- Maintained reusable, readable codebases so any developer on the team could extend the work.

Back-End Developer — Speakers Institute / Boomer Inc.

APR 2018 — JUL 2020

- Built a centralized Learning Management System merging Protégé Central and SI Access into a single portal, with course registration and e-commerce checkout.
- Onboarded **100+ students** onto a \$25 AUD/month subscription with a \$40 AUD registration fee — approximately **\$30,000 AUD in annual recurring revenue** processed through the platform.
- Customized the WooCommerce payment gateway to fit the organization's course-sales flow.
- Integrated the LMS with Ontraport (CRM) and automated enrollment campaigns for online courses.
- Implemented Google Analytics across all company sites and delivered quarterly performance reports that drove each site's enhancement roadmap.
- Built landing pages for monthly webinar campaigns and automated the online events calendar.

Web Developer — Transformational Outsourcing Inc.

JAN 2014 — FEB 2018

- Built and customized WordPress child themes, widgets, and plugins, extending existing themes and third-party software to client requirements.
- Configured and troubleshooted servers and DNS records; optimized load speed and capacity.
- Led content migration for web redesign projects, running multiple projects concurrently on deadline.

EARLIER EXPERIENCE

Web Developer — JetFlight Aviation Services

2013

Built an interactive company website with a custom admin control panel, database, and e-commerce store.

Computer Technical Secretary — General Electro Mechanical Services

2011 — 2013

Built an in-house PHP payroll system; produced project quotations and billing statements.

EDUCATION

Diploma in Web Application Development — AMA Computer Learning Center
